

This subject prepares students to care for women during pregnancy, childbirth, and the postpartum period. It also covers gynecological disorders and reproductive health, emphasizing safe motherhood and family welfare.

Syllabus:

- Anatomy and physiology of the female reproductive system
- Menstrual cycle and hormonal regulation
- Pregnancy: diagnosis, physiological changes, antenatal care
- Intranatal care – stages of labor, management of normal and abnormal labor
- Postnatal care of mother and newborn
- High-risk pregnancies and complications (e.g., preeclampsia, hemorrhage)
-

Newborn assessment and care

-

Family planning methods and counseling

-

Common gynecological disorders (e.g., fibroids, PID, PCOD)

-

Infertility and its management

-

Legal and ethical issues in maternity care
